Panasonic

KX-NSX Series and Ultimate Activation Key

KX-NSX PBX SERIES

Panasonic's KX-NSX servers are designed to meet the complex communication needs of large enterprises in today's working world, offering features and functionality that improve efficiency, mobility, and collaboration in any work environment.
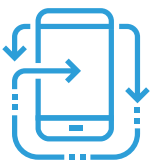

FLEXIBILITY

With User Based Management, the NSX series allows employees to use any of their devices (including desk phones, DECT phones, smart phones, PCs and tablets) as a company phone. This seamless connectivity increases workplace productivity and offers flexibility to employees based on their location and situation.

SCALABILITY

The NSX PBX supports up to 2,000 users and provides connectability for up to 32 sites and up to 128 tenants. Experience seamless communication with customers and colleagues alike and enjoy cost savings on internal calls.

RELIABILITY

With 1 + 1 redundancy, the KX-NSX system smoothly handles malfunctions and network problems to enable continuous operation. If the primary PBX fails, operations automatically switch to the secondary PBX, minimizing downtime and keeping your business running.

OPERABILITY

The KX-NSX series reduces on-site maintenance costs, ensures quick system recovery, supports secured communication using SIP TLS, and offers LDAP integration with user databases or existing assets. In addition, take advantage of the built-in media relay gateway, which enables using IP extension at remote office without having PBX main unit on the remote site.

Unlock Possibilities with the Ultimate AK

With the Ultimate AK for the KX-NSX series, Panasonic has revolutionized the landscape of IP PBX pricing. Take the guesswork out of determining which employees require which feature licenses and instead purchase an Ultimate Activation Key to unlock 31 feature applications, at a low cost.

RETAILER

- Peripheral Device AK *(monitor premises with the Video Door Phone)*
