

PANASONIC NCS BENEFITS TO ROI

As the cost of effective and efficient healthcare for seniors continues to rise, administrators struggle to balance the needs of patients and staff while providing quality care. Panasonic's Nurse Call System (NCS) is a comprehensive, one-stop healthcare solution that adapts easily to any existing infrastructure in any type of facility.

- Reduce IT costs by keeping your current platform, thanks to compatible technology that adapts to traditional analogue systems.
- Lower operating costs by not having to replace your entire NCS all at once.
- Eliminate the paperwork and management of multiple third-party vendors with Panasonic's technology—it adjusts to existing cabling systems that other vendors can't.
- Receive the best support from a single, expert vendor and reduce wait and response times from multiple vendors.
- Improve patient-caregiver communication with a centralized, scalable, flexible, and easy to install speakerphone powered by one-touch buttons.
- Respond to patient alarms more efficiently by routing their calls to their care provider's wireless phone via the NCS's wireless integration.
- Maintain a profitable assisted living facility and increase word-of-mouth marketing through happy patients who receive top notch healthcare.
- Experience higher occupancy through safe and satisfied residents.
